Being on the forefront of anti-virus research, the AvSoft Labs have created a collection of high performance products for virus prevention and elimination. Superior design and techniques ensure that our products succeed where other anti-virus systems fail. Following are the products that are part of the SmartCOP suite.

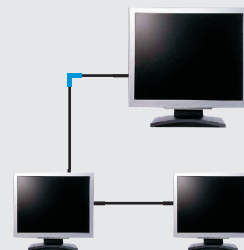

SmartCOP Anti-Virus for Desktops

- Provides a comprehensive protection against all kinds of Viruses, Trojans, Worms, Spyware & Adware.
- InstaUpdate allows automatic updates via the Internet or Disk.
- Scans and cleans incoming mails on the fly.
- Equipped with a powerful mail content filter to prevent entry of unknown viruses.
- Real-time file-system protection to stop viruses coming from LAN, WAN or Disks.
- A built-in Personal Firewall allows comprehensive protection from Internet based threats.
- Removable media blocking feature to prevent viruses entering from unknown media.
- Event Manager alerts the user in case of any important notification, like if a new update is available.

SmartCOP ServerCentric for Corporate Networks

- Automatic distribution of updates to all nodes on the network.
- AVI technology isolates virus source on the network.
- Possible to manage policies exclusively from server.
- Remote installation for installing SmartCOP on computers from a central server.
- Remote Quarantine Management.
- Maintains a log of all virus activity on the network.
- Possible to scan remote computers/groups by just a point & click from the server.
- Updates can be scheduled as and when required.
- Extensive reporting gives the management the summary of the virus activity on the network in the form of graphs.
- Web reporting feature available.

SmartCOP SMTP MailTrap for E-Mail Proxy/Gateway Servers

- Available on Windows as well as Linux Servers.
- High performance multi-threaded architecture.
- Fully configurable setup allows a high degree of customization.
- Can be used for mail Gateways as well as Proxy servers.
- Real-time monitoring of all mail activity.
- Auto responder to notify the Sender/Admin of any virus infected messages.
- A powerful content filter to prevent unknown viruses from entering the network.
- Automatic updates require no shutting down or rebooting of the server.
- Complete tracing of mails.
- Seamless integration with SmartCOP Corporate Edition.
- Comprehensive blocking of Spam.
- Full integration with RBL and SBL.
- Provides Domain restrictions to block open-relays.
